

CEMENT, FLYASH & LIME

Wagners is a family owned Australian Company with a reputation for delivering high quality products and services internationally. Our focus is on cement and lime, reinforcing steel, on site concrete supply, contract crushing and bulk transport, as well as lightweight composite fibre products. Wagners strives to find innovative, effective and economic solutions for our clients.

Wagners has access to the finest Australian and international cementitious materials for the manufacture of their quality cement products. The Wagners team of professional cement experts utilise state of the art manufacturing and laboratory facilities in order to produce cement that meets Australian Industry Standards. All Wagners' cement conforms to the requirements of Australian Standards AS 3972, AS 3582.1, AS 3582.2, AS 3582.3, MRTS70 and Specification SP 43.

Wagners Cement Plant at Pinkenba in Brisbane is a grinding plant producing GP (General Purpose) cement and GB (General Blended) cements. The plant is certified under ISO 9001 and operates a fully accredited NATA laboratory on site.

- Bricklaying
- Rendering
- General Concrete
- Block Laying
- Coloured Concrete

WAGNERS

General Purpose Cement GP

Portland cement clinker is ground to a targeted fineness (Blaine) resulting in a general purpose cement suitable for most construction applications. General Purpose Cement is the most widely used cement in Australia.

General Blended Cement FAB-GB-HSC

Portland cement blended with 25% Fly Ash. FAB provides improved workability with increased durability while still retaining the strength of General Purpose Cement. FAB cement also displays reduced alkali and silica reaction with increased resistance to sulphate intrusion. Fly Ash Blended Cement is widely used in road stabilisation and general construction.

The blended cements produced are both Flyash and Ground Granulated Blast Furnace Slag blends using cement clinker imported from Shandong Shanshui Cement in China.

Market demand for flyash blended cements for use in both the premix concrete and the road stabilisation industries is generally a blend of 75% GP cement, 25% flyash. Wagners Cement produces this blend at both the Pinkenba plant and at a blending facility in Townsville. Other flyash blends of varying blend ratios can also be produced on request at both plants.

Wagners Cement flyash source is the Millmerran Power Station situated some 230 kilometres west of Pinkenba.

Wagners cements are registered with ATIC (Australian Technical Infrastructure Committee), listed with Queensland Main Roads Registered Supplier List and have been accepted for use by Roads and Maritime Services, New South Wales and VicRoads in Victoria.

Hydrated Lime

To complement our world class cement grinding facility we also import and distribute Lime and other silica based products. We do so to service particularly our civil contracting customers however we are also able to service customers in the waste treatment and disposal industry, the agricultural industry, the water treatment industry and the construction materials manufacturing industry. We have a state of the art handling and logistics operation that ensures good quality control and punctual deliveries 100% of the time.
